PLANNING

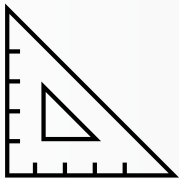

You've initiated the process of exploring power track solutions for your home or office. What's next?

Strategizing the placement of a Power Track can enhance the effectiveness of its implementation. Start with this simple guide to kick off the process.

Location

Pinpoint the area where you intend to deploy the power track. Ideal starting points include the kitchen, study, and TV areas—spaces where the demand for additional power outlets is likely to be higher.

Measure

Determine the needed length of the power track by estimating the number of appliances and their designated locations. Take note that each meter of Line8 power track can accommodate up to 14 outlets, offering a practical guideline for efficient power distribution.

Customise

Line8 power tracks offer customization options, allowing you to incorporate additional accessories such as HDMI and data points. Tailor the length with precision down to the millimeter and choose from a selection of 11 premium finishes to meet your specific requirements.

Adaptors

Choose from our diverse range of adaptors, featuring a total of 10 finishes and various plug types, including British, Australian, and international options. Additionally, explore adaptors with various functions such as IoT capabilities and USB charging to meet your specific needs.

ORDERING

Placing an order with us is a straightforward process.

Whether you have a clear idea of the add-on options for your power track or if you're uncertain, our team is here to assist you every step of the way. We will provide expert advice and recommendations to ensure your selection aligns perfectly with your needs.

Order

Contact our friendly sales agents or visit your nearest experience center to place your order. Our sales team will offer expert advice, especially if you plan to install it on special surfaces like glass, marble, or walls. They will guide you on electrical placements and requirements to ensure a seamless and successful installation.

Site Survey

If you're still undecided, consider arranging a site survey with our team. Our installation experts will assess your specific needs, provide expert advice, and take measurements if necessary. This may involve coordination with multiple parties, such as your solid surface supplier or carpenter, to ensure a comprehensive understanding of the project requirements.

Production

Every Line8 power track is meticulously crafted and hand-finished in Singapore, tailored to your unique selection of finishes, options, and length specifications. Please allocate 5-7 working days for your order to be expertly fabricated before it is ready for delivery.

Delivery / Installation

Our professional site team will either deliver your customized order, or if you've chosen installation services, they will install and commission the power track for use. Your satisfaction and a seamless experience are our priorities.

INSTALLATION GUIDE

MODEL S POWER TRACK

Terminal Left or Right

Line8 power tracks can be terminated from either the left or right end. Please ensure that you have ordered the correct terminal side. In the event of an incorrect side, feel free to contact us for an exchange or return it to us, and we will change the terminal for you. Note that left and right side terminals cannot be interchanged.

Preparing for Installation

Surface Inspection:

Ensure that the installation surface is flat and devoid of any obstructions.

Electrical Wire Point:

Confirm that the electrical wire point is situated within the intended installation area and not positioned above, below, or outside of it.

Relocation Consideration:

If the electrical point is outside the designated installation location, be aware that additional drilling or cutting work may be required to relocate the electrical wires.

Installer Capabilities:

For simple wall adjustments, our installers equipped with the necessary tools can manage the relocation tasks. However, for more complex scenarios, such as feature walls, external contractors may be needed for cutting work.

By addressing these key points, you can facilitate a smoother installation process.

INSTALLATION GUIDE

MODEL S POWER TRACK

1

In your Line8 power track package, you will find:

2

Turn off the mains power supply to your incoming cable point

3

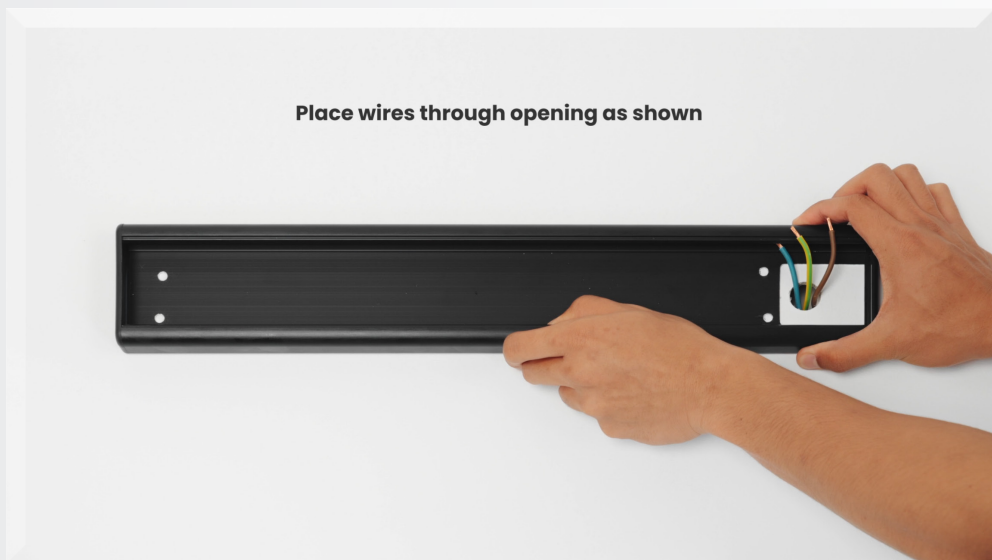

Strip and prepare the incoming cables for the power supply as shown

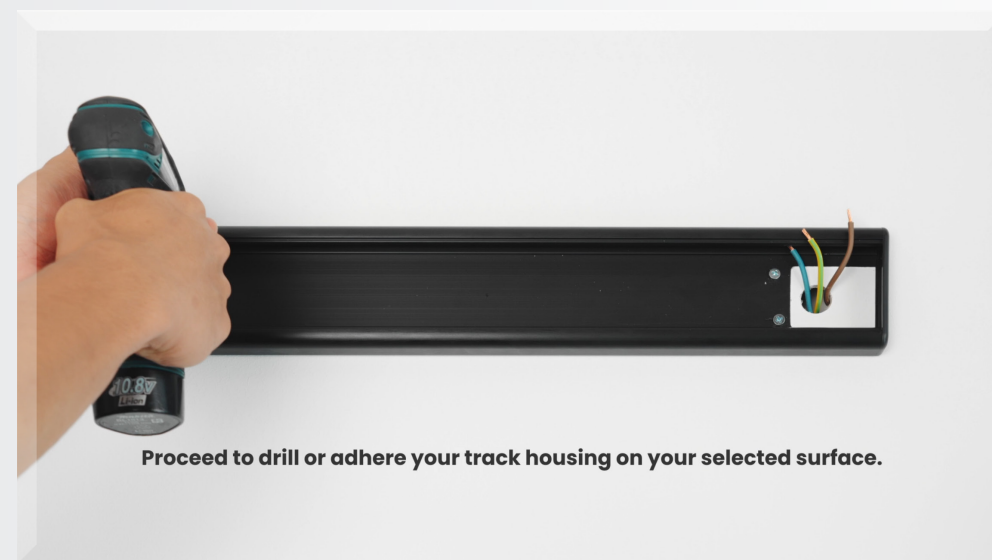

4

5

6

7

Click the snap clips into place in the housing cavity as shown

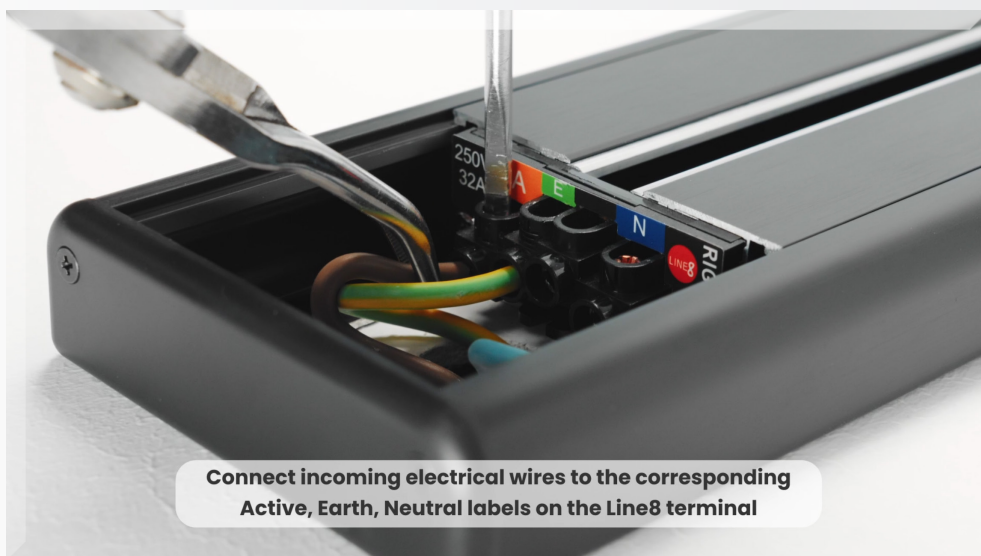

8

Next, snap the track's core into the housing where you have completed placing snap clips.

9

Connect incoming electrical wires to the corresponding Active, Earth, Neutral labels on the Line8 terminal

10

Lastly, Install cover plate to finish installation by pushing it over the wiring opening.

11

Insert, twist and plug in your appliances in your Line8 Power Socket System

12

INSTALLATION GUIDE
